

In conjunction with BPM 2010

## The 3rd Workshop on Business Process Management and Social Software

### BPMS2'10

13 September 2010, Hoboken New Jersey

[http://crinfo.univ-paris1.fr/users/nurcan/BPMS2\\_2010/](http://crinfo.univ-paris1.fr/users/nurcan/BPMS2_2010/)

**Deadline for workshop paper submissions: May 21, 2010**

Social software<sup>1</sup> is a new paradigm that is spreading quickly in society, organizations and economics. Social software has created a multitude of success stories such as wikipedia.org and the development of the Linux operating system. Therefore, more and more enterprises regard social software as a means for further improvement of their business processes and business models. For example, they integrate their customers into product development by using blogs to capture ideas for new products and features. Thus, business processes have to be adapted to new communication patterns between customers and the enterprise: for example, the communication with the customer is increasingly a bi-directional communication with the customer and among the customers. Social software also offers new possibilities to enhance business processes by improving the exchange of knowledge and information, to speed up decisions, etc. Social software is based on four principles: weak ties, social production, egalitarianism and mutual service provisioning.

- Weak ties<sup>2</sup> are spontaneously established contacts between individuals that create new views and allow combining competencies. Social software supports the creation of weak ties by supporting to create contacts in impulse between non-predetermined individuals.
- Social Production<sup>3</sup> is the creation of artefacts, by combining the input from independent contributors without predetermining the way to do this. By this means it is possible to integrate new and innovative contributions not identified or planned in advance. Social mechanisms such as reputation assure quality in social production in an a posteriori approach by enabling a collective evaluation by all participants.
- Egalitarianism is the attitude of handling individuals equally. Social software highly relies on egalitarianism and therefore strives for giving all participants the same rights to contribute. This is done with the intention to encourage a maximum of contributors and to get the best solution fusing a high number of contributions, thus enabling the wisdom of the crowds<sup>4</sup>. Social software realizes egalitarianism by abolishing hierarchical structures, merging the roles of contributors and consumers and introducing a culture of trust.
- Mutual Service Provisioning. Social software abolishes the separation of service provider and consumer by introducing the idea, that service provisioning is a mutual process of service exchange. Thus both service provider and consumer (or better prosumer) provide services to one another in order co-create value<sup>5</sup>. This mutual service provisioning contrasts to the idea of industrial service provisioning, where services are produced in separation from the customer to achieve scaling effects.

Up to now, the interaction of social software and its underlying paradigms with business processes have not been investigated in depth. Therefore, the objective of the workshop is to explore how social software interacts with business process management, how business process management has to change to comply with weak ties, social production, egalitarianism and mutual service, and how business processes may profit from these principles.

### Topics for Discussion

The workshop will discuss three topics:

#### 1. New opportunities provided by social software for BPM

- How can business processes fit to business models based on the paradigm of social production?
- Which new possibilities for the design of business processes are created by social software?
- How are trust and reputation established in business processes using social software?
- Are there business processes which require sociality, especially when they are not well defined (as production workflows) but collaborative or ad hoc?
- How do weak ties, social production, egalitarianism and mutual service provisioning influence the design of business processes?
- What is the impact on conceptual models for those categories of business processes which are not well-defined or that we do not wish to freeze using classical business process enactment systems for instance?

## 2. Engineering next generation of business processes: BPM 2.0 ?

- Do we need new BPM methods and/or paradigms to cope with social software?
- Is there an influence of weak ties, social production, egalitarianism and mutual service provisioning on BPM methods?
- Are there any similarities or relationships with process mining techniques and also with workflow control and role patterns?
- Which phases of the BPM lifecycle (Design, Deployment, Performance, and Evaluation) are affected the most by social software?
- How can BPM profit from using social software?
- Which types of social software can be used in which phases of the BPM lifecycle?

## 3. Business process implementation support by social software

- Which kinds of social software can be used to implement business processes?
- Which categories of business processes can profit from social software?
- How does social software interact with WFMS or other business process support systems?
- How can we use Wikis, Blogs etc. to support business processes?
- What new kinds of business knowledge representation are offered by social production?

## Submission

Prospective authors are invited to submit papers for presentation in any of the areas listed above. Only papers in English will be accepted. Length of full papers must not exceed 12 pages (There is no possibility to buy additional pages). Position papers and tool reports should be no longer than 6 pages. Papers should be submitted in the LNBIP format (<http://www.springer.com/series/7911>). Papers have to present original research contributions not concurrently submitted elsewhere. The title page must contain a short abstract, a classification of the topics covered, preferably using the list of topics above, and an indication of the submission category (regular paper/position paper/tool report).

Please use **EasyChair** for submitting your paper: <http://www.easychair.org/conferences/?conf=bpms210>.

The paper selection will be based upon the relevance of a paper to the main topics, as well as upon its quality and potential to generate relevant discussion. All the workshop papers will be published by Springer as a post-proceeding volume (to be sent around 4 months after the workshop) in their Lecture Notes in Business Information Processing (LNBIP) series.

## Expected results

All papers will be published on workshop wiki ([www.bpms2.org](http://www.bpms2.org)) before the workshop, so that everybody can learn about the problems that are important for other participants. A blog will be used to encourage and support discussions. The workshop will consist of long and short paper presentations, brainstorming sessions and discussions. The workshop report will be created collaboratively using a wiki. A special issue over all workshops will be published in a journal (decision in progress).

The BPMS2'08 workshop on BPM2008 in Milan had the 4<sup>th</sup> rank in submissions from 8 workshops. Acceptance rate was 50 %. The BPMS'09 attracted 13 submissions, from which 7 have been accepted. The paper collaboratively written by the BPMS2'08 workshop participants has been accepted for publication in the Journal Software Process: Improvement and Practice.

## Organizers

Selmin Nurcan – University Paris 1 Panthéon Sorbonne, France  
Rainer Schmidt – University of Applied Sciences, Aalen, Germany

## Important dates

**Paper submissions deadline: May 21, 2010**  
Notification of Acceptance: June 30, 2010  
Camera-ready papers deadline: July 25, 2010  
Workshop: September 13, 2010

## Primary Contact

Rainer Schmidt HTW Aalen

Phone: +49 7361 576 – 4241  
Fax: + 49 7361 576 – 4316

## Workshop Program Committee

Ilia Bider - IbisSoft, Sweden  
Nadine Blinn - University of Hamburg, Germany  
Jan Bosch - Intuit, Mountain View, California, USA  
Ralf Klamma - Informatik 5, RWTH Aachen, Germany  
Sai Peck Lee - University of Malaya, Kuala Lumpur, Malaysia  
Dragan Gasevic - School of Computing and Information Systems, Athabasca University, Canada  
Werner Geyer - IBM T.J. Watson Research, Collaborative User Experience Group, Cambridge, USA  
Gustaf Neumann - Vienna University of Economics and Business Administration, Vienna, Austria  
Selmin Nurcan - University Paris 1 Pantheon Sorbonne, France  
Gil Regev - EPFL & Itecor, Switzerland  
Michael Rosemann - Faculty of Information Technology Queensland University of Technology, Australia  
Nick Russell - Eindhoven University of Technology, The Netherlands  
Rainer Schmidt - University of Applied Sciences, Aalen, Germany  
Miguel-Ángel Sicilia - University of Alcalá, Madrid, Spain  
Pnina Soffer - Department of Management Information Systems, University of Haifa, Israel  
Markus Strohmaier - Graz University of Technology, Austria  
Karsten Wendland - University of Applied Sciences, Aalen, Germany
